

Nama : Muhammad Rafihadian Irfandhana

NIM : 242410101088

Kelas A

Aktivitas Mandiri 5

1. Buat Resource Controller: php artisan make:controller MahasiswaController --resource --model=Mahasiswa

```
PS C:\Users\Rafi\Dikedim Laravel ver> php artisan make:controller MahasiswaController --resource --model=Mahasiswa
INFO Controller [C:\Users\Rafi\Dikedim Laravel ver\app\Http\Controllers\MahasiswaController.php] created successfully.
```

2. Daftarkan di routes/web.php: Route::resource('mahasiswa', MahasiswaController::class)

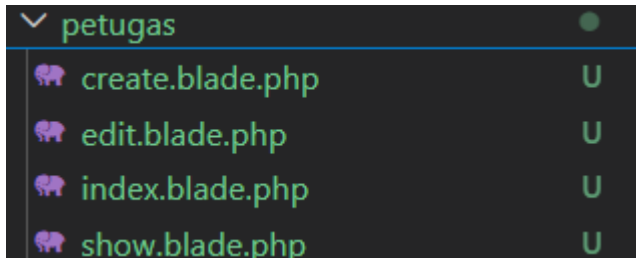

```
<?php

use Illuminate\Support\Facades\Route;
use App\Http\Controllers\BarangController;
use App\Http\Controllers\PetugasController;

// Petugas Resource Routes
Route::resource('petugas', PetugasController::class);

Route::get('/hitung/{a}/{b}', fn($a, $b) => $a + $b);
$hasil = 10 + 25;
Route::get('/hasil', fn() => "Hasil penjumlahan 10 + 25 adalah: $hasil");
Route::view('/tentang', 'tentang');
Route::get('/', [BarangController::class, 'index']);
Route::post('/simpan-barang', [BarangController::class, 'store'])->name('barang.store');
```

3. Buat semua view: mahasiswa/index.blade.php (tabel + pagination), create.blade.php (form), edit.blade.php (form pre-filled), show.blade.php (detail)

4. Implementasi method index() — ambil semua mahasiswa dengan paginate(10) dan tampilkan ke view

```
public function index()
{
    $petugas = Petugas::paginate(10);
    return view('petugas.index', compact('petugas'));
}
```

5. Implementasi create() dan store() — dengan validasi nim (unique), nama (min:3), email (email|unique), jurusan (in:SI,TI,MI)

```

public function store(Request $request)
{
    $validated = $request->validate([
        'nip' => 'required|string|unique:petugas,nip',
        'nama' => 'required|string|min:3',
        'email' => 'required|email|unique:petugas,email',
        'jabatan' => 'required|in:Kepala Gudang,Petugas Gudang,Admin,Supervisor',
        'no_telepon' => 'nullable|string',
        'foto' => 'nullable|image|mimes:jpg,png|max:2048',
    ]);

    // Handle file upload
    if ($request->hasFile('foto')) {
        $fotoPath = $request->file('foto')->store('petugas', 'public');
        $validated['foto'] = $fotoPath;
    }

    Petugas::create($validated);

    return redirect()->route('petugas.index')
        ->with('success', 'Data petugas berhasil ditambahkan!');
}

```

6. Implementasi edit() dan update() — tampilkan form dengan old() atau \$mahasiswa->field, validasi unique kecuali ID ini

```

public function store(Request $request)
{
    $validated = $request->validate([
        'nip' => 'required|string|unique:petugas,nip',
        'nama' => 'required|string|min:3',
        'email' => 'required|email|unique:petugas,email',
        'jabatan' => 'required|in:Kepala Gudang,Petugas Gudang,Admin,Supervisor',
        'no_telepon' => 'nullable|string',
        'foto' => 'nullable|image|mimes:jpg,png|max:2048',
    ]);

    // Handle file upload
    if ($request->hasFile('foto')) {
        $fotoPath = $request->file('foto')->store('petugas', 'public');
        $validated['foto'] = $fotoPath;
    }

    Petugas::create($validated);

    return redirect()->route('petugas.index')
        ->with('success', 'Data petugas berhasil ditambahkan!');
}

```

7. Implementasi destroy() — dengan konfirmasi JavaScript sebelum hapus

```

public function destroy(Petugas $petugas)
{
    // Delete foto
    if ($petugas->foto && \Storage::disk('public')->exists($petugas->foto)) {
        \Storage::disk('public')->delete($petugas->foto);
    }

    $petugas->delete();

    return redirect()->route('petugas.index')
        ->with('success', 'Data petugas berhasil dihapus!');
}

```

8. Tambahkan flash message di layout dan tampilkan session('success') / session('error')

```

@if(session('success'))
    <div class="alert alert-success alert-dismissible fade show" role="alert">
        <strong>Berhasil!</strong> {{ session('success') }}
        <button type="button" class="btn-close" data-bs-dismiss="alert" aria-label="Close"></button>
    </div>
@endif

@if(session('error'))
    <div class="alert alert-danger alert-dismissible fade show" role="alert">
        <strong>Error!</strong> {{ session('error') }}
        <button type="button" class="btn-close" data-bs-dismiss="alert" aria-label="Close"></button>
    </div>
@endif

@if(session('warning'))
    <div class="alert alert-warning alert-dismissible fade show" role="alert">
        <strong>Perhatian!</strong> {{ session('warning') }}
        <button type="button" class="btn-close" data-bs-dismiss="alert" aria-label="Close"></button>
    </div>
@endif

```

9. BONUS: Tambahkan fitur upload foto profil dengan validasi  
image|mimes:jpg,png|max:2048

## Aktivitas Mandiri 6

1. Instal Laravel Breeze: composer require laravel/breeze --dev, kemudian php artisan breeze:install blade

```

C:\Users\Rafi\Dikedit>composer require laravel/breeze --dev
./composer.json has been updated
Running composer update laravel/breeze
Loading composer repositories with package information
Updating dependencies
Lock file operations: 1 install, 0 updates, 0 removals
- Locking laravel/breeze (v2.4.2)
Writing lock file
Installing dependencies from lock file (including require-dev)
Package operations: 1 install, 0 updates, 0 removals
- Downloading laravel/breeze (v2.4.2)
- Installing laravel/breeze (v2.4.2): Extracting archive
Generating optimized autoload files

```

2. Jalankan php artisan migrate untuk membuat tabel users

```
PS C:\Users\Rafi> php artisan migrate
```

3. Jalankan npm install && npm run dev untuk build assets

```
cd "C:\Users\Rafi\Dikedim Laravel ver"; npm
install; npm run dev
```

4. Coba register dan login di <http://127.0.0.1:8000/register>

Name

Email

Password

Confirm Password

5. Amankan semua route mahasiswa dengan middleware auth:

Route::middleware('auth')->resource('mahasiswa', MahasiswaController::class)

```
public function index()
{
    // Get only mahasiswa records created by the logged-in user
    $mahasiswas = Mahasiswa::where('user_id', auth()->id()->get());
    return view('mahasiswa.index', compact('mahasiswas'));
}
```

6. Coba akses /mahasiswa tanpa login — pastikan diredirect ke halaman login

```
public function index()
{
    // Get only mahasiswa records created by the logged-in user
    $mahasiswas = Mahasiswa::where('user_id', auth()->id()->get());
    return view('mahasiswa.index', compact('mahasiswas'));
}
```

7. Tambahkan nama user di navbar: {{ auth()->user()->name }}

```
http://127.0.0.1:8000/
```

8. Buat custom middleware CekAdmin yang hanya mengizinkan user dengan role 'admin' mengakses route tertentu

```

@section('title', 'Daftar Petugas Gudang')

@section('content')
<div class="row mb-4">
  <div class="col-md-8">
    <h1 class="h3 mb-0"><i class="bi bi-people"></i> Daftar Petugas Gudang</h1>
  </div>
  <div class="col-md-4 text-end">
    <a href="{{ route('petugas.create') }}" class="btn btn-primary">
      <i class="bi bi-plus-circle"></i> Tambah Petugas
    </a>
  </div>
</div>

```

9. BONUS: Modifikasi index() Controller agar hanya menampilkan data yang dibuat oleh user yang sedang login
